## ORIENTAL ORCHIDS OF THE GARDEN

(IRIS KAEMPFER)

Your garden is not complete until you have this beautiful flower growing in your perennial collection. Now you can grow your own Orchids by planting Iris Kaempfer, which is entirely different from all other Iris and comes into bloom as the early summer fades, continuing to bloom until mid-fall. The huge blooms of velvety texture measure 6 to 8 inches across. The leaves are long narrow and gracefully formed, and the plants remain decorative even after the blooming period is over. It is no wonder that the Kaempfer is called the "Orchid of the Garden." Excellent for cutting it will grow 3 to 4 feet high. Plants thrive in well drained fertile soil (it is fatal to select a location where water stands during winter).

## BENCO'S NEW GOLDEN QUEEN RASPBERRY

A real novelty! A new sensational yellow Raspberry of the black Raspberry type. It is a chance seedling that is a cross between the red Raspberry and the black Raspberry. It is both a novelty and a great fruit producer—the berry being of a rich golden color of medium size. Its flavor is entirely different from any berry grown—a blend between the red and black Raspberry. In many cases it is grown in preference to the red and black Raspberries, because of its sugar-sweet flavor. Just before the berry fully matures it is a rich yellow color, and when fully ripe reaches a rich golden yellow. It is truly a novelty shrub for your garden—the most unusual feature of this new variety is that after the first frost the canes will turn a rich yellow color, which is very outstanding during the winter months. The fruit can be eaten fresh or can also be successfully preserved; again they are very outstanding in a glass fruit jar, for the berries retain their rich golden color. Get some for your garden now!

## NEW BLUE BERRIES

**GROW YOUR OWN BLUEBERRIES—PICK THEM FRESH OFF THE BUSH**

Cultivated blueberries are hardy shrubs of rare beauty; they are doubly valuable because they are fruitful and ornamental all year.

As a commercial proposition it is one of the most profitable fruits to grow. There is a big market. They make good money in a very short time, for you can begin picking the second or third season after planting.

Choose piece of ground easily supplied with moisture during dry summer months; it should not, however, at any time become water-logged. Plant in full sun if possible; they will also do well in partial shade. Be sure the soil is acid. Give only shallow cultivation; not over 2 to 3 inches deep, so as to leave the roots undisturbed.

**CONCORD**. Bush of upright habit, at maturity exceeding 6 feet in height. The berries are large.

**JERSEY**. Very large and vigorous in habit. The light blue berries are very large.

We recommend ordering both varieties so they will cross-pollinate and fruit freely.

### EVERBEARING CYNTHIANA

An Ideal Arbor Grape

2 YEAR VINES

Each .....79c

Dozen for .....\$7.88

This new Everbearing grape begins to ripen about the time the Concord does, and continues until frost. Has ripe grapes, green ones and bloom on all the time after they begin to get ripe until the growing season is ended by frost. The best red wine grape known. We say the best because red wine made from this variety, grown at Bushburg, Mo., about 85 miles south of St. Louis on the Mississippi River won first prize at the World's Exposition at Vienna, Austria, as the best red wine from all nations. (This grape originated right here in Benton County, Arkansas). A very vigorous grower; for making grape arbors it is without equal. For high, dry countries it appears to be at home as well as on the creek and river bottoms. It does not require a rich soil, but prefers a dry soil of moderate fertility. It is so sweet it is almost too rich to eat out of hand. It has a higher content of sugar than any grape known. The berries are about the size of the Delaware, while the clusters are larger; color is black covered with blue bloom.
